in environmental protection, fire fighting, NGOs
and industrial and political decision makers**

www.bioversal.com

Ladies and Gentlemen:

In the framework of a large-scale conference in Rome with responsible members of the Italian Ministry of the Environment we have been informed that BIOVERSAL is the only product that satisfies the stated requirements as a means for the disposal of contaminations in the sea. This was tested and confirmed by this ministry's testing centre, namely ARPAT in Ferrara, <http://www.arpat.toscana.it/> .

Due to these for us enjoyable yet not unexpected test results in connection with using BIOVERSAL for oil spills, the previous provision in the corresponding ordinances and decrees has even been entirely adjusted to our technology with biocompatible surfactants, meaning BIOVERSAL. Furthermore, due authorisation had been granted by the Spanish Ministry of Transport, MARINE MERCANTE department to use the product for oil contaminations in the harbours. The document is able to be downloaded <http://www.bioversal.com> click "news".

The Italian experts were provided with the scientific basis for this - the comprehensive expert report by Univ. Prof. Dr. Reinhard Dallinger. As one can confirm from this expert report, also certified by other experts, with its large number of the references, BIOVERSAL contains biocompatible surfactants, which have a positive sustainable effect in comparison to xenobiotic surfactants.

We offer and recommend BIOVERSAL for many different applications in fire protection and fire fighting, in industrial cleaning sectors as well as the field of ground and water decontamination.

Our product BIOVERSAL is an internationally tested environment helping unique foam fire-fighting agent and enables shorter support staff labour times and incomparably

more favourable revitalisation. BIOVERSAL represents the state of the art of biotechnology. It would be very important for us if you would also promote its environmentally conscientious application.

In order to provide you with the groundwork for the current information we can send the aforementioned ecotoxicological expert report by Univ. Prof. Dr. Reinhard Dallinger by mail. Thus, you can also verify the quality and effectiveness of BIOVERSAL from the top scientific perspective. Attached on our homepage [Http://www.bioversal.com](http://www.bioversal.com) is the expertise in English, in German, French, Spanish or Portuguese, language for download.

Unfortunately foam fire fighting agents with xenobiotic active ingredients are still being bought particularly by industry and even by fire-fighters although we all know that these foam agents extremely negatively impact and sustainably damage the environment, the microbiology - the foundation of our lives.

We have to accept every conscientious expert solution with respect to toxic accidents in nature, as well as fire fighting with highly surfactant-contaminated water, where nature has been injured. However, the impacts of each oil spill disposal could be positive if fire extinguishing foams or oil residue disposal with BIOVERSAL technology were to be applied.

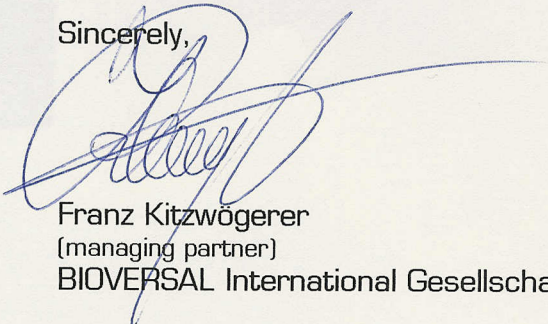

Accidents unfortunately occur. However, first through our innovative product BIOVERSAL there is the possibility of repairing these damages to nature cost effectively, environmentally compatibly and sustainably.

Due to our environmental awareness and not merely for commercial reasons we are committed to the tireless dissemination of information, in order to provide you with a better understanding of the real advantages of our product and its new technology and therefore we request you accept these new findings and correspondingly take them into consideration in your future decisions. We would be happy to provide you support with in this.

We hope that with these for us very good findings we have been able to provide a further solid basis for the use of BIOVERSAL products.

For more information, please contact our Homepage with a lot of references <http://www.bioversal.com/bioversal2004/main.html> click "download" choose "folder-language": Chinese, Croatian, Czech, English, French, German, Italian, Portuguese, Slovenian, Spanish, Hungarian and Slovakian.

Sincerely,

Franz Kitzwögerer
